

NextGen CRM System Review Report

Feature coverage, implementation details, screenshots, and recommended next review items.

Prepared for: Senior management / senior technical review

Prepared on: 18 May 2026

System: NextGen CRM, Laravel 13, React 19, Inertia, MySQL, Tailwind CSS/shadcn UI

Local review URL: <http://127.0.0.1:8001/login>

Executive Summary

The CRM is currently built as a Laravel and React business system for managing Nextgen Technology Limited PNG customer records, service requests, subscriptions, domain hosting, renewals, payments, invoice files, credits, users, roles, and customer self-service access.

The system already covers the main operational goals requested for client listing, subscriptions by service category, renewal monitoring, invoice/payment attachments, and service outage credits that extend expiry dates.

Requirement Coverage

Requirement	Status	Implemented Details
List all client information	Available	Customer register stores company name, contact person, email, phone, industry, status, website, address, notes, follow-up date, and related request counts.
List subscriptions for each client by service	Available	Subscription register links each subscription to a client and categorizes services as Domain Hosting, Internet Service, GPS, Email Hosting, Website Hosting, or Other.
Monitor expiry dates and renewals	Available	Subscriptions store start date, expiry date, renewal cycle, and status. The Renewals page searches renewal records by month and updates selected renewal dates.
Attach payment and invoice files	Available	Payment records support PDF, image, Word, and Excel attachments up to 10 MB, including invoice number, payment reference, payment date, covered period, amount, and notes.
Track payments and unused credits	Available	Credits record outage start/end dates, month count, value, reason, and automatically extend the subscription expiry date. Example: a March-April 2026 ISP outage creates a two-month credit beyond the original expiry.
Automatic reminder notifications	Needs decision	Renewal monitoring exists through the Renewals page. Automated email/SMS reminders are not confirmed as implemented and should be reviewed as a next enhancement.

Features Added

Customer Management

- Customer dashboard and customer listing.
- Create, update, and admin delete customer records.
- Customer status tracking for lead, active, inactive, and suspended clients.
- Follow-up date and notes for account management.

Subscriptions

- Client-linked subscription register.
- Service categories for domain hosting, internet service, GPS, email hosting, website hosting, and other services.
- Start date, expiry date, renewal cycle, status, amount, reference, and notes.
- Search and service summary counts.

Payments and Invoices

- Payment records per subscription.
- Payment period start and end dates.
- Invoice number, payment reference, amount, and notes.
- Invoice/payment file upload and secure download by staff users.

Credits

- Service outage credit records.
- Credit start/end dates and calculated credit months.
- Optional credit value and required reason.
- Automatic subscription expiry extension when a credit is applied.

Additional Modules

- **Renewals:** monthly renewal search covering subscription expiry and domain/hosting renewal records.
- **Service Requests:** support request tracking with customer, assignee, status, priority, service type, quote, renewal, and internal notes.
- **Domain Registrations:** domain registration workflow and domain listing/reporting.
- **User and Role Management:** admin, staff, and customer roles with customer-linked portal access.
- **Customer Portal:** customer users can view their own service requests and submit requests.
- **Bulk Email Validator:** validates email lists and supports sending bulk email when SMTP credentials are configured.
- **Admin Settings:** branding, logo, SMTP, and system settings support.
- **Security:** Laravel Fortify authentication, email verification middleware, role checks, two-factor support, and restricted staff/admin actions.

Data Model Summary

Area	Main Records	Important Fields
Clients	customers	Company, contact, email, phone, industry, status, website, address, notes, follow-up date.
Subscriptions	customer_subscriptions	Customer, service type, service name, reference, status, start date, expiry date, renewal cycle, amount, notes.
Payments	subscription_payments	Subscription, paid date, payment period, amount, reference, invoice number, uploaded file metadata, notes.
Credits	subscription_credits	Subscription, credit type, start date, end date, months, amount, applied expiry date, reason.

Area	Main Records	Important Fields
Requests	domain_hosting_requests	Customer, service type, domain/request details, status, priority, quote, assignee, renewal date, notes.
Access	users	Name, email, role, active status, linked customer, password, two-factor fields.

Recommended Next Review Items

- Confirm whether management wants automatic renewal reminders by email, SMS, or dashboard-only alerts.
- Confirm exact report exports required: client list, subscriptions by service, expired/soon-to-expire renewals, payment ledger, and credit ledger.
- Confirm whether customer portal users should see invoices, payments, and credits, or only service requests.
- Confirm approval workflow for service credits so outage credits cannot be applied without manager approval.
- Confirm backup, production hosting, SSL, and user account policy before production rollout.

1. Login and access control

Screen: /login

The login screen for NextGen CRM Technology features a dark teal background with a subtle circular pattern. At the top center, the company logo is displayed, consisting of a red and yellow circular icon followed by the text "NextGen CRM Technology". Below the logo, a dark gray login form is centered. The form contains the following elements: a "Username *" label above a text input field; a "Password *" label above a password input field with a toggle icon; a "Tick the Box *" label above a reCAPTCHA widget; and a bright green "Login" button at the bottom.

Bulk Email Validator

Instructions:

Step 1: Add all the emails to the textbox, one email on each line (basically copy/paste from the spreadsheet into the textbox)

Step 2: Press the validate emails button

Step 3: The script will validate the list of emails and advise which ones are incorrect

Subject

Email subject

Message

Write the email message to send to each valid address.

Add the list of emails here. One email per line.
